

**SERIAL NO. 09/912,206**  
**PROPOSED NEW CLAIMS**

11. A light fixture mountable to a support surface comprising:

a first support section located on said light fixture, said first support section including at least one upper aperture and two opposingly located lower apertures;

a second support adapted to be secured to said support surface and adapted to engage said first support, said second support including at least one upper projection and at least two opposingly located lower projections, said projections positioned to align with said apertures on said first support;

whereby said lower projections are first insertable through said lower apertures to permit said light fixture to rest upon said lower projections and to be rotated upwardly so that said upper projection is inserted through said upper aperture to secure said light fixture to said second support.

12. The device of claim 11 wherein said lower apertures are notches.

13. The device of claim 11 wherein said lower projections are angled upwardly.

14. The device of claim 11 wherein said upper projection includes a threaded portion which coacts with a threaded element to secure said fixture to said support surface.
